

Networking opportunity for students in the life sciences

Science graduates wishing to transition from academia to the industrial world usually face two major challenges: lack of a common language and lack of direct interaction with industry professionals.

BioTech Annecto X Division aims to provide an exciting networking opportunity for science graduates to discover Montreal-based Canadian and international life science organisations operating in specific industry segments.

Our first event, "**The Future of Medicine**", will be dedicated to personalized medicine, orphan drugs, and the med-tech industry. It will allow you to discuss the challenges, innovations, and growth potential of the health care system and to build your own professional network.

Invited professionals will not only explain the ins and outs of their current industry positions, but also share their personal academia-to-industry transition stories. The key objective of the event is to boost fruitful lines of communication among professionals and talented advanced degree holders to prepare the latter for a successful career transition.

The event will bring together Montreal's top academic institutions (Concordia, McGill, UdeM, IRCM, IRIC), academia-to-industry transition facilitators (Mitacs, FQRNT), and leading industrial players (30+ companies) to create connections and transform them into long-term relationships.

When

Tuesday, November 5, 2013

6:30pm - 9:30pm

Venue

L'île Noire
1649 rue St-Denis
